X1114 PROFESSIONAL

New 14' Silage Bagger

Providing lower cost feed storage for every size farm.

Ag-Bag leads with higher productivity.

The X1114 Professional is the most powerful, highest capacity silage bagger in the industry, featuring many Miller-engineered design enhancements. Its 11' rotor packs 25% more per foot than a 12' bagger, with Genuine Ag-Bag bags available up to 500'. Ag-Bag has a silage bagger to fit the needs of every size operation. And no other bagger can match the bag packing performance of the Ag-Bag design.

Lower feed storage costs. Less feed loss.

It costs less to store feed with the Ag-Bag system compared to alternative storage options. Consider this! Feed stored in a bunker is likely to have 15% to 25% shrinkage loss. For every 100 tons of feed (valued at \$50/ton), a 15% loss would cost \$750! If you're storing 10,000 tons, a 15% loss would cost \$75,000. A 20% loss would total \$100,000 in lost feed. What's more, dairy cows prefer silage from the Ag-Bag system.
