

AG-BAG. MASTER SEAL

AIR -TIGHT, WATER-TIGHT, AND REUSABLE

Ag-Bag Master Seal is the best way to seal your bags. As soon as you are done filling the Ag-Bag bag and have moved the bagger, seal the bag immediately so the anaerobic bacteria can begin to work. Ag-Bag recommends Master Seal plastic strip.

Lay the bag end out flat and seal according to instructions. This is an effluent and gas tight seal, and more effective than traditional methods.

Master Seal is available in pre-cut lengths and 250' rolls. Each box of pre-cut Master Seal contains 4 pieces of one length size.
